Flywheel Digital

Director of Engineering, Walmart Retail

off. Senior Software Engineer

Helping lead the engineering initatives for the Walmart Retail column at one of the world's largest B2B eCommerce services

- Member of engineering leadership group overseeing integration of twelve brands into an industry-standard platform
- Leading private retailer partnerships and technical integrations with revenue impact worth $200M+
- Overseeing re-architecture of our legacy data pipelines, processing burst capacities upwards of 1-1.5 PB/day
- Previously oversaw migration of the popular SKUNinja retailer management platform from CakePHP to Laravel

2022

Wunderite

Senior Software Engineer

Contributed to a major technical overhaul and re-architecture of a YCombinator backed contender to the industry-standard electronic signature solution, Docusign. Involved a migration to Laravel, Vue.js, and TypeScript, as well as the development of a completely in-house digital document signature, certification, and auditing system

2021

WellCaddie

Head of Software Engineering

Oversaw software development initiatives for the entire company, including embedded hardware applications for IoT data collection. First engineer hired, helped grow the company and service to a national platform with a valuation of $15M+

2018

University of Oklahoma

Software Engineer

One of three core maintainers of O.V.A.L., a world record holding VR pedagogy toolset used by universities nationwide (including Harvard, Columbia, Dartmouth, and Stanford) for groundbreaking anthropological, architectural, and medical research
